

Project Title: Patient & Provider Experiences with Musculoskeletal (MSK) Care in Alberta

*This project has been approved by the University of Calgary Conjoint Health
Research Ethics Board (REB22-0881)*

Have you received
care for your
shoulder, knee, or
low back problem?

We want to hear about
your experience!

What is involved?

We would like to do **one 30-45 minute interview** with you.

We would like to hear about what healthcare services you
have used and what you thought about your care.

How can I participate?

Call (403) 701-0141 or email bonejoint.scn@ahs.ca

Study Overview

Project Title:

Patient & Provider Experiences with Musculoskeletal (MSK) Care in Alberta

Musculoskeletal (MSK) conditions, particularly those affecting the low back, knee and shoulder, pose a significant burden in relation to dysfunction and disability, and healthcare utilization. Access to quality MSK care is very important for Albertans living with these conditions.

The **MSK Transformation (MSK-T) Program**, a strategic priority of the Bone & Joint Health Strategic Clinical Network (BJH SCN), is being implemented to improve the MSK health system in Alberta, which will lead to quality improvement and better health care for Albertans.

The **purpose** of this study is to obtain a better understanding of the quality of MSK health care services in Alberta, specifically for shoulder, knee, and low back problems, from the perspective of patients and providers.

We are currently recruiting:

- Albertans who have received health care for low back, knee or shoulder problems
- Health care professionals who provide health care for low back, knee or shoulder problems
